While the EPI, EPQ and EPQR were originally developed in England and then extended to other English-speaking areas, the cross-cultural extension of this field of personality research quickly led to the translation and testing of the instruments in non-English speaking environments (Barrett & Eysenck, 1984; Eysenck & Eysenck, 1983).

**The short-form revised Eysenck personality questionnaire ...**
Eysenck's theory is based primarily on physiology and genetics. Although he was a behaviorist who considered learned habits of great importance, he considers personality differences as growing out of our genetic inheritance. He is, therefore, primarily interested in what is usually called temperament.

**The Eysenck Personality Questionnaire (EPQ) - Trans4mind**
Eysenck (1952, 1967, 1982) proposed a theory of personality based on biological factors, arguing that individuals inherit a type of nervous system that affects their ability to learn and adapt to the environment.

**Theories of Personality | Simply Psychology**
In psychology, Eysenck Personality Questionnaire (EPQ) is a questionnaire to assess the personality traits of a person; this is not the same questionnaire as the Eysenck's personality Inventory or EPI which was an earlier instrument also produced by Hans Eysenck. It was devised by the psychologists Hans Jürgen Eysenck and Sybil B. G. Eysenck.

**Eysenck Personality Questionnaire - Wikipedia**

High P scores display tendencies to developing psychotic disorders while at the same time falling short of actual psychotic conditions. People with high P scores are inclined toward being cruel, inhumane, socially indifferent, hostile, aggressive, not considerate of danger, insular, glacial, and intolerant.
EdITS - Eysenck Personality Questionnaire - Revised (EPQ-R)
The Eysenck Personality Questionnaire (EPQ) is a three dimensional personality assessment tool that was preceded by an overlapping two-dimensional measure called the Eysenck Personality Inventory (EPI). The EPI was developed by Hans and Sybil Eysenck [1] to measure the two broad dimensions of Extraversion-Introversion* and Neuroticism-Stability.
